

P248 R-A

The operating record, generated from the committed register

main @ b375908a1 Suite: 5505·5504·0·1 e2e: 385/0/6 named

Queues: 0 engineering · 7 reality · 5 founder · 0 incident

Every figure on this page derives from committed artifacts at the stamp above — the release rows from `src/lib/launch/release-history.mjs` (conserved against git's own release commits by a build-failing guard), queues and sport tiers from the closure packets. Nothing here is hand-kept, the order is enforced chronological at generation, and the builder re-parses its own output so a truncated or reordered export fails instead of shipping. Paper-only and educational throughout.

The release register — every production release, oldest first

183 releases first 141-143-- (2026-08-07) last 247-R-F (2026-09-08)

RELEASE	COMMIT	DATE	WHAT SHIPPED
141-143--		2026-08-07	UNRECORDED in this register: these programs predate the release-history data structure; their receipts live in the program reports, not here — never invented retroactively
144-147-A-I	281de088	2026-08-08	ledger v2, identity ratchet, provable-only Build compat, hour-aware labels, 12-stage sport gate (MLB sole LIVE_ELIGIBLE)
148-B-D	118a1701d	2026-08-09	/sports revived as the four-sport schedule directory; NFL first real capture; EPL research corpus + baselines

RELEASE	COMMIT	DATE	WHAT SHIPPED
149-R1-R3	3d5cd6f8	2026-08-09	shared replay harness + strict artifact modes; EPL 380/380 capture with dual-source membership verification Defects caught: community source named two promoted clubs outside the committed alias table — quarantined, never auto-minted
150-A	55fa6eb4c	2026-08-09	NBA + UFC forward coverage live on /sports; four-sport daily cadence workflow
151-A+B	ed9e913df	2026-08-10	NFL research vertical (1,001 finals, 7 ties preserved) + EPL settlement validated on a full real season Defects caught: Pro Bowl AFC/NFC rows caught by the 32-team refusal
152-A	4c2dbb032	2026-08-10	NBA research vertical (4,179 finals; leap-day + All-Star + Cup-final traps caught by exact-count refusals) + cadence receipt #1 Defects caught: ESPN monthly windows miss leap days; season.year labels the end year
153-A+E	af554cbba	2026-08-10	UFC research vertical (abstaining Elo, coverage 25.6% by design) + the /launch work board Defects caught: ESPN MMA endpoint rate-limits bursts — resumable fetcher with 15s spacing
154-A	e23f855dd	2026-08-10	EPL current-results path operational before opening day: honest PRESEASON states, canonical join, quarantine-total
155-C+D	adac8cca1	2026-08-10	board filters (read-only) + pipeline lanes + shadow contract with per-sport live-input matrix
156-B	7032fe644	2026-08-10	shadowGaps wired into the work board — odds merged to ONE founder card spanning four sports
157-A	ccf37e3e8	2026-08-10	shared four-sport model registry: derived index echoing committed evaluations verbatim, INCOMPLETE-honest, ranking vocabulary banned
158-A	a6b517388	2026-08-10	/sports information architecture: one Sports·Schedules destination across command rail, nav strip, footer, homepage strip Defects caught: a NAV_ITEMS-only destination is invisible at desktop widths — desktop wayfinding is the command rail
159-A	49bcc7220	2026-08-10	route assurance inventory: 50 routes reconciled across source, ownership table, and built export — zero findings
160-A	703a26e2e	2026-08-10	product-truth contract: one owner per public figure, fail-closed reconciliation, bounded documented exceptions Defects caught: cross-lane auditors initially added to LANE_DIRS — the readers-allowlist is the correct repoint shape
161-A	bcec50d3a	2026-08-11	Simulation Hub non-promotion proofs: 7 metamorphic guards + wiring bans close every accidental-promotion vector
161-B	81192df8f	2026-08-11	cadence receipt #2 processed per sport (runs 31396780843 + 31500117960); morning window bounded as ONE documented exception across three guards Defects caught: daily-products stamps today ~2h before board generation — money legitimately leads the board by one day every morning; frozen test clocks rot with the cadence
161-C	38c2b2e78	2026-08-11	three-engine route/state assurance: 8-route contract on chromium/webkit/firefox in every quality-gate run, money-strip artifact parity, closed state vocabularies Defects caught: homepage featured-sim cards requested ESPN logos by full team name (~10 CDN 404s per visit, hidden by the monogram fallback) — fixed by threading teamAbbrs
161-D	96f31a1f4	2026-08-11	NFL results side: FINAL-only tie=PUSH contract validated on 1,001 corpus finals; capture + snapshot-union id-join adapter; cadence-wired Defects caught: first live final (CAR-ARI Aug 7) predated schedule capture — quarantined for missing lineage, proving the Sprint-045 rule live

RELEASE	COMMIT	DATE	WHAT SHIPPED
161-closeout	af03ef1b4	2026-08-11	evidence ledger refreshed with the Aug 11 board + production run (13 entries, 0 contradictions)
162-A	5e1027533	2026-08-11	NBA results vertical: tied-final quarantine contract validated on 4,179 corpus finals (zero pushes), keyless capture + id-join adapter, cadence-wired; honest NO_RESULTS_YET off-season first receipt Defects caught: none — first live capture returned the truthful empty window
162-C	e7d98314e	2026-08-11	/launch command center: health strip, REALITY_GATED watches with countdowns, derived sprint lanes, auditable release history with the mechanical pruning invariant
162-D	e5a6ed7bd	2026-08-11	UFC forward-lineage classifier (stable-id joins, basis-recorded corners, closed taxonomy) reproducing the real fight-day addition from committed captures
162-B	63f321127	2026-08-11	results paths discoverable on /sports (per-sport artifact-state lines); undated 'coming soon' promise replaced with the stated absence condition; three-engine proof extended Defects caught: a guard pinned the stale phrase — repointed to the invariant and the phrase is now banned
162-closeout	f3cad466c	2026-08-11	roadmap deduplicated against REALITY_GATED watches (one issue, one card); evidence regenerated at wall clock Defects caught: the closeout commit itself claimed history entries an aborted edit never applied — caught by re-reading the diff stat, fixed in this follow-up
162-E	de9afefce	2026-08-11	EPL results-path hardening (kickoff move, alias both-directions, score-bearing non-finals, memoryless corrections, duplicates) + corrections runbook with the ledger-writer acceptance condition Defects caught: the alias case's premise was wrong — Arsenal FC is a committed alias and joins; the test now proves both directions
162-F	6ade60159	2026-08-11	injuries source evaluation ACCEPTED with two named conditions (identity validation; absence is not health); matrix notes upgraded without flipping states
162-G	8dccfe2b4	2026-08-11	injuries contract: URL-derived athlete identity with refusal, closed taxonomies, absence=UNKNOWN never healthy, staleness widens; real-sample fixtures from the live probe
162-H	8e8d3b566	2026-08-11	injuries capture live: first committed captures normalized 800+77 live entries with zero quarantines (facts only, prose never stored); NFL matrix entry AVAILABLE on the receipt; NBA half-receipt recorded not stretched; cadence step wired Defects caught: the P156 shadow-gap guard hard-coded the gap count — honest movement broke it; now derived from shadowGaps()
162-I	aeabffe19	2026-08-11	UFC bout_winner settlement contract validated on all 1,716 corpus finals — the 25 DRAW_OR_NC bouts are exactly the quarantines (winner-only source refuses to split draw from NC); every sport now carries a corpus-validated grading spec
162-J	e65f5f834	2026-08-11	UFC results operational: capture + bout-id adapter through the corpus-validated contract; first real run quarantined all 12 pre-capture finals for lineage with exact reconciliation — the third sport to prove the lineage rule live Defects caught: the /sports assurance spec expected 'completed games' and UFC honestly says 'bouts' — caught on all three engines, regex now noun-aware
163-A	ad984c04d	2026-08-11	four stale P162 gate watchers stopped (targets mapped terminal first, zero orphan pollers verified) + the bounded single-target watcher whose poll loop structurally cannot repeat the unfulfillable-predicate leak + operating runbook Defects caught: root cause named: newest-run polling filtered by a superseded SHA can never match again; harness timeouts are not enforced on backgrounded loops
163-B	1fb0fb79e	2026-08-11	NBA lineups REJECTED with evidence (no free official pre-start source; box-score starters are POST_START by definition) + the fail-closed six-class lineup contract that any future licensed adapter must satisfy

RELEASE	COMMIT	DATE	WHAT SHIPPED
163-C	af7815601	2026-08-11	cadence receipt verifier: pure per-sport evaluator with closed fail-closed verdicts, committed expectations for tomorrow, one-command invocation smoke-proven on yesterday's real run — nothing dispatched, nothing polls overnight Defects caught: the first NFL expectation said NO_RESULTS_YET — wrong, the trailing window still holds the quarantined Aug 7 final; corrected before shipping
163-E	c31bc3808	2026-08-12	NFL corrections monitor (score-correction/status-regression/disappeared all review-gated) + first-join candidates discovered from artifacts (DET@CIN surfaces for Aug 13) + corrections runbook
163-F	402da93f9	2026-08-12	per-event input-completeness classifier: every representative event REFUSES generation with exact reasons; NFL alone earns READY_EXCEPT_ODDS on its captured-injuries receipt
163-D	faada98a6	2026-08-12	FIRST JOINED UFC RESULTS: five real finals joined with committed lineage and graded, 12 pre-capture finals stayed quarantined, reconciliation exact; post-card lineage = valid no-change receipt (66 window-slides, zero replacements) Defects caught: the legitimate 83→17 window slide would have tripped tomorrow's mass-deletion rule — allowWindowSlide expectation added and pinned with tonight's real numbers; a count-era guard repointed to a floor
163-G+H	3db8a1d4a	2026-08-12	Today queue on /launch; OVERDUE watch state (a missed observation cannot rot as merely DUE); route payload measurements recorded (/results 8.5MB flagged as its own follow-up card); secret scan clean; /sports honesty re-verified with the new UFC artifact Defects caught: the /results static HTML weighs 8.5MB — measured, flagged, deliberately NOT hacked at overnight
163-I	a8113cc99	2026-08-12	UFC corrections monitor: OVERTURNED_RESULT and DECISION_CHANGE review-gated; tonight's five finals read as exactly five BECAME_FINAL from the committed capture, zero invented overturns
163-J	2dc1778fd	2026-08-12	EPL corrections monitor ready before opening day + the n=3 results-monitor core consolidation; NFL/UFC tests passed untouched on the wrappers (behavioral identity by test) Defects caught: one core evidence string drifted from the pinned phrasing — the tests won, not the rewrite
164-R1	e8b20f1c6	2026-08-12	shared-blocker registry (seven blockers, once each, closed states, secrets discipline guard-enforced) + the dependency-ordered Founder Action Sheet on /launch
164-R2	9fe54d536	2026-08-12	odds engineering complete: provider-neutral contract with visible-vig no-vig, fail-closed secret shapes, four-sport fixtures, authorization-gated canary (dry-run default, ceiling+floor, redacted, self-leak-scanned; refusals proven as real subprocesses) Defects caught: a structural pin matched the docstring's mention of the refused form — repointed to the executable property
164-R5	80bb3a66a	2026-08-12	legal section-3 packet (11 numbered items, FOR REVIEW) + publish guard: unapproved text structurally unshippable; approval = named reviewer + role + date + packet version
164-R6+R7	e9a6e2740	2026-08-12	beta access (PII structurally refused, deny-by-default, prerequisite gate wired to the real legal manifest) + admin-access ADR and deny-by-default contract; all seven shared blockers ENGINEERING_READY_FOR_FOUNDER
165-A/B/D/H	8d74c5ad3	2026-08-12	Founder Response Form (enumerated non-secret choices; PII/secret/stale-version refusal; transitions structurally unable to CLOSE) + read-only orchestrator proven on the template; legal approvals now require the exact reviewed content hash; analytics collector deployment spec; read-only admin-access verifier Defects caught: the stronger legal hash rule reached the beta prerequisite fixture — fixture followed the rule, the guard kept its teeth
165-A-addendum	8ba0e6a3b	2026-08-12	the Founder Action Sheet renders each blocker's exact answer tokens (recommended first) + the form pointer — answerable from one screen

RELEASE	COMMIT	DATE	WHAT SHIPPED
165-J	6f7a9af4d	2026-08-12	one authority per blocker: five founder roadmap duplicates pruned into the registry; stale shipped NOW item removed; horizons refilled with the post-answer ENGINEERING sequence; the board's odds card is an explicit pointer Defects caught: the horizon guard rightly refused empty lanes — filled with execution items, not decision duplicates
165-I	487f467b8	2026-08-12	first fully-verified scheduled cadence: run 31605451090, ten classes, zero failures, first scheduled injuries receipts Defects caught: the countdown fixture clock rotted when the watch moved — advanced with the watch
166-A+B	ce17d09aa	2026-08-12	operator console IA: eleven-group contract with drift-proof sticky nav, env badge + as-of clock, Runbooks index, and the Dhruv transition-readiness section (documentation only — no transfer occurred or authorized)
166-E	1a44eb9dc	2026-08-12	NFL deep slice: baseline Elo promoted to a leakage-proof cutoff-versioned strength state (params identical, target-game exclusion structural) + real-event assembly proving READY_EXCEPT_ODDS on the next scheduled game from committed artifacts
167-A	8a290c5cd	2026-08-12	protected operator deployment LIVE: separate gtp-ops project (internal build) behind Vercel Authentication; production domain removed after a ~4-minute unauthenticated window (incident + never-re-add rule recorded); verify-admin-access 4/4; Dhruv access PENDING_IDENTITY (host plan gate) Defects caught: Standard Protection excludes auto-assigned production domains — discovered by probing, contained by domain deletion; the paid all-deployments tier was refused by program boundary
167-B	72be98187	2026-08-12	/launch became an operator product: IA v2 (12 groups, task-first + Onboarding), persistent left nav + mobile strip + env/commit top bar, five-phase daily loop (Observe→Verify→Build→Release→Close) derived purely from the board with exactly-once placement, top-3 actions, URL-state deep-link filters, per-sport stage receipts in words, protected-money tile, sanitized onboarding guide; verified in-browser at 390/768/1440
167-C	94710831a	2026-08-12	odds evidence lane: per-sport market scope (UFC h2h-only, EPL three-way + totals, NFL h2h/spreads/totals), three-way no-vig preserving the draw, pointed two-way same-point rule, provider→canonical joins with lineage (SWAPPED reported never flipped), seven-state availability classifier with the exact AUTHORIZATION_REQUIRED line on /launch; local canary refusal verified, zero credit calls
167-D	fdc1d43ae	2026-08-12	NFL first-result verification: the lineage gate fired LIVE on the first real final (CAR@ARI quarantined — no pre-event schedule capture exists; backfill forbidden), reconciliation exact, pinned as permanent real-data test + receipt doc; watch sharpened to when the cadence can land evidence (14:15Z); OT/tie join pins added
167-E	e1e8c50f3	2026-08-12	NFL v1 engine: analytical margin/total heads over the cutoff Elo (train 2023-24, held-out 2025: logLoss 0.6478 vs coin 0.6931, ECE 0.0446), preseason ABSTAINS by model card, shadow ladder live in tests over the real next event (DET@CIN abstains preseason, zero probability leakage) Defects caught: validateShadowRun demands provenance — caught by its own validator on first CURRENT emission
167-F	9b8aa29d3	2026-08-12	UFC winner engine: abstaining Elo promoted (coverage semantics preserved 25.4%, logLoss 0.6788, ECE 0.0157), identity by unique normalized name (ambiguity abstains), CARD_UNCERTAIN lineage gate (weigh-ins MISSING stated); REAL UFC 330 preflight committed: 11 READY_EXCEPT_ODDS + 1 ABSTAIN(SPARSE); weekend runbook gains shadow/market preflight steps
167-G	977f432af	2026-08-12	EPL engine: committed poisson baseline promoted with EXACT replay parity (n=1140, logLoss 1.0017), draw ECE 0.0262, RPS/totals diagnostics, deferred-alternatives stopping rule, lineups NOT_REQUIRED_FOR_TEAM_V1; shadow ladder proves all 10 opening fixtures READY_EXCEPT_ODDS (2 promoted clubs cold-start via verified list)
167-H	1a294d9c8	2026-08-12	all-sport prediction factory: adapter manifests, closed output-variant validators proven on the real engines, ONE readiness registry (six independent axes, receipts/reasons, cross-sport ranking banned in data and code) rendered verbatim on /launch; MLB described never wrapped; NBA compatibility proven at variant level without a fake model

RELEASE	COMMIT	DATE	WHAT SHIPPED
169-A	0cf89b8e2	2026-08-13	NFL source+identity foundation: registry roles incl. an explicitly UNSOURCED weather role, canonical player registry keyed by durable ids (first real capture 32/32 teams, 2,991 athletes, 0 quarantined), provider-data season typing, per-input freshness matrix
169-C	6c7dc70b3	2026-08-13	joint team-score simulation: deterministic seeded stream, legal scoring support, measured convergence; REPORTED win head = replay-validated elo-logistic with the margin-probit divergence as a visible diagnostic; preseason shrink FIT on 23-24 (0.2) with 2025 test at ~coin, stated; score MAE 7.584 beats naive 7.941, 80pct coverage 0.8015 Defects caught: its own eval caught the two-heads divergence (9.6pp) before anything shipped
169-D	b06027f80	2026-08-13	participation contract: closed typed set, absence-of-injury-data never health, preseason snap-scenario gate (real DET@CIN pools: >40 ROLE_UNCERTAIN per side, zero unevidenced actives), reviewed expiring overrides, allocation coherence refusals
169-F	664f0dd84	2026-08-13	anytime-TD engine: team-first Poisson allocation refusing without a committed points-to-TD calibration receipt; mandatory residual; passer/receiver one-event rule; four publication gates (modelled-yet-unpublishable is real); settlement credit rules (scoring player wins, passer-only loses, DNP voids) Defects caught: float residue at share-0 clamped by its own test
169-G	0f3010e06	2026-08-13	Endzone Vault: five modes, correlation-aware compatibility (same-game CORRELATION_NOT_VALIDATED without a joint receipt; cross-game independence disclosed), separate append-only paper ledger with first real NO_PLAY entry naming its three true blockers
169-J+K	fcdebec1b	2026-08-13	public /nfl honesty hub: real slate + finals from committed captures, market-by-market coverage table with typed states; route inventory 51/0 findings; boundary guards repointed to rendered-text rules (the /sports-revival pattern); NFL event-day runbook (T-24h through corrections) Defects caught: the sport-hub redirect-only rule and nav allowlist fired on the new route — adjudicated as the founder-charter graduation with the invariant preserved in rendered text
176-Phase 0	fecbcbe74	2026-08-13	the kickoff lock and post-start refusal PROVEN against real elapsed time
178-Phase 0	d12bde0c2	2026-08-14	withdraw P177's false-closure headline and guard against the next one
184-Phase-0+A	eeff42d61	2026-08-18	the measured UI/UX baseline, and a ratchet on the drift
196-A	a06dfa1cf	2026-08-23	launch: sport closure packets — the completion control plane (P196 Release A)
196-B	1e652ae02	2026-08-23	mlb: game-level predictions enter the public record; one owner for the risk-substitute rule (P196 Release B)
196-C	72d5a7d5c	2026-08-23	ufc: the 08-22 main card was ungradeable by construction — fixed, graded, and one record region (P196 Release C)
196-D	f8271a6f3	2026-08-23	epl: the learning artifact becomes the only live calibration-count authority (P196 Release D)
196-E	9d0becd95	2026-08-23	nfl: season cohorts before the season can blend them (P196 Release E)
196-F	607828d45	2026-08-23	nba: a healthy quiet lane can now prove it ran — the schedule cadence receipt (P196 Release F)
196-J	33ebc0699	2026-08-23	launch: roadmap reset to current truth; final P196 assurance regeneration (Release J)
197-A	058f76ea2	2026-08-23	ufc: seven stages proven by receipts — the operating loop closes (P197 Release A)
197-B	93813a826	2026-08-23	epl: five stages proven by receipts that already existed — 11/12 (P197 Release B)
197-C+D	0531593b5	2026-08-23	nfl+ux: regular-season readiness with frozen bars; the three-engine matrix runs green (P197 Releases C+D)
197-E	cf8a5acc2	2026-08-23	nba: first-event-ready foundation — verify what can be verified, gate what cannot (P197 Release E)

Release	Commit	Date	What Shipped
198-A	5140a3d37	2026-08-23	nba: the engineering queue reaches ZERO — every remaining gap names its gate (P198 Release A)
198-D+F	58d5fbad2	2026-08-24	ops+tiers: one executable operating system; the activation tiers are pinned as generated (P198 Releases D+F)
198-G	dc52ebca1	2026-08-24	assurance: final regeneration at the P198 tip — inventory reconciled, a11y structural clean (Release G)
198-closure	01464f3cb	2026-08-24	P198 reclassified COMPLETE on production convergence: covering SHA ancestry-proven over dc52ebca1; queue-zero live; first unattended night green (nightly settle, UFC post-card quiet exit, cadence receipts) Defects caught: the overnight receipts exposed a loop-scoped missing-count overwriting the cumulative MLB game record (fixed: derived from the linescore cache every write) and the predicted 08-23 snapshot seam day (closed: +45 rows from local history)
199-A	e05ea922b	2026-08-24	ufc: fight-week control — lineage on a cadence, the Aug-29 watch armed (P199 Release A)
199-D	300e870da	2026-08-24	founder: five gate decisions, answerable in one sitting (P199 Release D)
199-H	bba7f9c1e	2026-08-24	assurance: P199 final regeneration — conservation exact, receipts current (Release H)
200-R-A	9fcf78b5e	2026-08-24	parlay truth spine — lab eligibility truth fixes, risk-coverage matrix v2, relic guards restated
200-R-B	8d8b3be36	2026-08-24	homepage journey reset — three front-door actions, four-sport hub, suggested-parlays preview
200-R-C	5b9960b38	2026-08-24	per-risk-tier Lab record + EPL stale-claim fix
200-R-D	48b74abb3	2026-08-24	primary nav trimmed to six destinations + Results record directory
200-R-E	33bacf4ee	2026-08-24	/today carries the daily parlay evaluations + retired-link fix
200-R-F	c8be5fe64	2026-08-24	coverage builder learns the multi lane's tier-grid dialect
201-Phase 0	69948157a	2026-08-24	operating record reconciled + derived artifacts at one stamp
201-R-A	19f64d7ec	2026-08-24	product-day authority + qualified-leg contract + versioned risk rubric
201-R-B	1e39711f8	2026-08-24	NFL lane closed by machinery — grader, ladder, one shared band engine
201-R-C	2e9174afb	2026-08-24	Suggested Parlays destination completed — NFL lane page + every lane reachable from /build
201-R-D	76634222d	2026-08-24	mobile bar = the six primary destinations (charter F1)
201-R-E	5a9b21d15	2026-08-24	per-sport Top 10 on /today, from the one ranked owner
201-R-F	60727b521	2026-08-24	lab conservation proven — one real orphan found, adjudicated by name
201-L	763a7ea29	2026-08-24	final assurance regeneration at one stamp (2026-08-24T19:55Z)
202-Phase 0	1ed07208c	2026-08-24	baseline reconciled + a real P0 caught and fixed at its owner
202-R-A	0fe202399	2026-08-24	product-day full adoption — the homepage stops rediscovering truth
202-R-B	7e118391e	2026-08-24	qualified-leg adoption on Build + Market Center — and the guards caught six real claims
202-R-C	4e5b69728	2026-08-24	picks-board filter chips — selection over the one ranking, state in the URL
202-R-C fix	884917729	2026-08-24	chip border tokenized — the colour ratchet was right
202-R-D	c92770ec6	2026-08-24	claims contract — the guard suite over the existing three-layer pattern

RELEASE	COMMIT	DATE	WHAT SHIPPED
202-R-E	1cbe25a94	2026-08-24	signature-product audit — eleven lanes, every one typed
202-R-F	c99a8dace	2026-08-24	three-engine × four-width matrix — and it caught two real defects
202-R-L	c31b035af	2026-08-24	final assurance — everything regenerated at one stamp (21:20Z)
203-R-A	35d9c21a3	2026-08-24	the operating record becomes a generated, conserved, self-validating artifact Defects caught: its own validator caught the legacy/new register blocks interleaving out of date order, and the schema guard caught empty departments + a misplaced closure row before commit
203-R-B	f494d06db	2026-08-24	EPL pair four closes live — Fulham 2-3 Chelsea graded end to end through the deployed owners (match HIT p=0.381; 62 player rows graded, 18 void; paired learning 4/30, market ahead, SAMPLE_TOO_SMALL stated)
203-R-K	9f0247a71	2026-08-24	final assurance — the daily loop proven live (two MLB cycles conserve; UFC population-exact 12=12; NFL typed refusals), everything regenerated at the close stamp; production converged on the exact tip Defects caught: the bout-set diff refuted my own P202 scratch claim — the 13-to-12 read was the pre-rebuild artifact shape, corrected in this commit
204-R-A	ad3795681	2026-08-24	final-file truth — the founder's PDF was right: object-coercion queue text and empty posture cards fixed at the view-model; final-output verifier renders and parses the actual PDF, writes the checksum receipt /launch renders; eight corruption fixtures proven to fail Defects caught: the in-flight conservation rule broke when a bot commit took HEAD — restated to newest-convention-commit
204-R-H	71c86c7aa	2026-08-24	operator onboarding — the current loop on one page (cadence table with per-workflow receipts); the retired June-era manual loop labelled so a new operator cannot run dead commands
205-R-A	244d56389	2026-08-25	the exact bytes users download — the wrong boundary found, proven, and closed (verified PDF embedded behind the downloads capability; content-addressed console copy; structural row verifier v2 with twelve failing fixtures) Defects caught: the stricter machinery caught a null-null register row, five space-bearing ids the old regex missed, a stale-receipt package refusal, and its own ban-string inside a new register row
206-R-A	cc9a1937a	2026-08-25	activation-gap truth (every non-proven stage instrument-built and bar-frozen — REALITY/FOUNDER only) + full controls/assets inspection + the conservation window restated to the nightly's real cadence Defects caught: the window fix hit the Intl midnight-hour-24 trap — third repo occurrence; hourCycle h23
206-R-K	785a8e8bc	2026-08-25	final assurance — engineering-complete on all three sports; e2e matrix grown to 413/0/6 with the 28-check controls/assets spec; the filter-restore test restated day-phase-proof
207-R-A	29d682270	2026-08-25	overnight receipts verified (Aug-24 settled 1-14 honestly); Bank Builder trio tokenized (98 literals, ratchet locked 1,268→1,170); the 8.1MB /results fixed at its render owner (cap-3 + 79 linked date archives, −65%) with a page-weight budget guard
207-R-K	f3fe0c397	2026-08-25	all-day close — everything regenerated at 11:45Z, record chain verified; four webkit matrix timeouts proven load contention (12/12 in isolation), named as such
208-Phase-0	ec358f5bf	2026-08-25	takeover baseline proven (local=origin=production c960ad8b0; suite 5,110/0-fail fresh); founder confusion reproduced mechanically from the built link graph (three labels for the picks job, no Home on any surface, swap-only suggested cards); target IA + release plan committed (docs/design/p208-ia-contract.md)
208-R-A	fc97b01d1	2026-08-25	unified Parlay Center: /build (Suggested, default) + /build/custom (Build Your Own) as real routes; ONE reader draft on ONE canonical leg identity (slip store; matchup dropped from the key after surfaces disagreed); Customize-this-card seeds the shared draft from the published slip; zero-leg mobile pill removed; legacy anchors + one-hop deep links preserved Defects caught: the new built-HTML guards failed CI's buildless unit lane (fixed in bf88f884f: assert-when-built convention)

RELEASE	COMMIT	DATE	WHAT SHIPPED
208-R-B	ea762aa9c	2026-08-25	one nav contract: six primaries (Home/Today/Simulate/Picks/Parlay Center/Results) on every surface from the canonical list; mobile Menu sheet (rail-minus-bar, 19 destinations); money chips off the global strip to their owners; homepage hero renamed to destinations + Recent-results proof strip; ratchet 1170→1166 measured Defects caught: the retired mobile complement strip revived itself as a second nav when Results/Sports left the bar (removed structurally); the mr-dub mobile-surface guard had passed vacuously since P201 (restated)
208-R-C	c655a5f0b	2026-08-26	shared sport-hub shell: one SportHubNav on MLB/EPL/UFC/NFL fed by one section registry (anchors in-page, capabilities as routes); conditional sections filtered so no strip item is dead; self-consistency guard over the built bytes on any slate; anchor scroll margins
208-R-DHI	c006ae4c2	2026-08-26	cross-sport tools on one vocabulary (six stale Picks-Lab/retired-route call sites repointed; named CTAs); robots.txt + sitemap.xml derived from the route inventory (37 public URLs); page-weight budgets extended to the redesigned surfaces from ONE module; /launch Product Experience panel (nav contract derived from navigation.ts, findings with resolution stamps, budgets, screenshot sets) Defects caught: the rebase rewrote R-C's local hash — the register carries the pushed hash, and the findings artifact was corrected to match
209-Phase-0	809f30571	2026-08-26	takeover baseline verified (production b23cedb38 ancestry-proven; fresh suite 5,126/0-fail); P208 log's in-flight final-assurance row corrected with the deployed receipt; simulation findings + target committed (S1/S2 P0: no date navigation, hydration-only hand-kept sport list)
209-R-ABC	a1c2388c0	2026-08-26	date-first/sport-first /simulate on ONE selector (typed state matrix, counts reconcile by construction, 22 static date routes); honest state machine (illegal jumps throw, unearned terminals fail closed, precomputed vocabulary); five code-native sport scenes + arena fallback behind the motion-token reduced-motion guard; browser-proven ready path (six phases → real report) and refusal path (stated reason, in place); ratchet 1166→1159 measured Defects caught: own design: the SETTLED script could not legally reach COMPLETE (LOADING_INPUTS→COMPLETE was not a transition) — fixed to the full five-step script before ship
209-R-J	f38310345	2026-08-26	operator Simulation Experience panel (derived: day-selector window/totals, theme coverage incl. fallback, machine contract, guard list); MLB ready games route DIRECT to their own gated runner (the stage yields — no stacked ceremonies); final assurance at one stamp (routes 62/0, activation gates unchanged, record 125 rows PDF-verified) Defects caught: the 'empty' MLB report chased during E was its own gated generate-reveal design — verified on production bytes before touching anything
210-R-A	6539cec1a	2026-08-26	F8 CLOSED: 1,007 exact token substitutions in three measured rounds (only hue merge dE2000 0.40; near-misses got minted sibling tokens); machine-readable exception registry with per-file shrink-only ceilings + corruption guard; ratchet at the floor (1,159→162 total, reachable drift 706→32 all registered); perceptual before/after diff ≈ 0 on 16 four-width screenshots Defects caught: the P193 green-cast guard pinned the literal its own migration replaced — repointed to token definition + consumers
210-R-B	37f4c15a0	2026-08-26	structured legs closed: ONE seed-map owner (MLB ladder + UFC/EPL/NFL lane ladders + identity-complete families); lane cards seed the shared draft (UFC fighter legs browser-proven); World Cup producers left ACTIVE composition under the archive contract; NBA exhibition-opponent registry types the London Lions capture (not an alias, not unknown); /build/custom weight budget corrected with its production receipt Defects caught: the denial trap hit this train's own disposition guard (comment named the removed function); the 500KB budget had been measured at an empty-pool midnight moment
210-final	105dfd4bb	2026-08-26	P210 final assurance at one stamp: A+B registered, F7/F8 stamped closed; CI 33017599392 green and production served this commit (cache-bypass receipt recorded by P211 R-0) Defects caught: the verdict's 'zero ordinary engineering' claim mis-filed the ui-loader slip-group leg dedupe (an ENGINEERING item) as a non-queue footnote — P211 R-0 corrected the record auditably and shipped the dedupe

RELEASE	COMMIT	DATE	WHAT SHIPPED
211-R-0	bf902988f	2026-08-26	reconciliation release: /build/custom cards ship ordered legIds against ONE legs-by-id index (387 unique legs serialize once; parity guards prove exact sequences, fail-open orphans, byte-identical card fields); P210's stale in-flight verdict corrected auditably with the proven production receipt; weight ceiling evidence-frozen at 1,400KB with the <600KB generation-time lever filed ENGINEERING Defects caught: P210's 'zero ordinary engineering' claim had mis-filed the dedupe as a non-queue footnote — the item was ENGINEERING and this release shipped it
211-R-A	f74566fe5	2026-08-26	ONE closed lifecycle for Bank Builder/Moonshot: state machine (illegal jumps throw, unearned states fail closed with the missing evidence named, duplicate runIds idempotent, single-writer lease, watchdog) + pure derivation from the canonical authorities (evaluation verbatim, settlement only from the official settler's dated artifact, progression only while the ledger owner's portfolio is fresh); the one receipt writer embeds lifecycle+watchdog at the same stamp with --dry-run recovery; admin status surfaces it, typing a MISSING receipt as the finding Defects caught: the ADVANCED evidence check missed the receipt's own policy version (caught by the WIN fixture); three same-named state vocabularies would have collided — renamed LIFECYCLE_* and documented all three as intentional
211-R-B	0f83fc13f	2026-08-26	selection policies frozen as versioned committed data (bank-builder@1, moonshot@1) recording the bars the products already run under; drift guard fails the build the moment a frozen bar and a live executor constant disagree; NO_PLAY reachability proven on empty and longshot-only pools; candidate schema canonical and never pre-activated; challenger slot honest (null WITH its pre-registration reason); receipts stamp real policy versions Defects caught: one transient suite failure in the first of three full runs (name uncaptured by the summary filter; two subsequent runs clean) — flagged for watch rather than claimed away
211-R-C	29b9dad4c	2026-08-26	forward-window coverage derived from the canonical artifacts per sport (counts reconcile by construction; refusals typed, never zeros; started events never forward): EPL night-before generation typed as the odds-freshness bar's design with the priced matchweek materialized as typed-refusal rows; NFL absence typed MODEL_ABSENT_BY_DECISION; UFC population-exact; MLB DAILY_BY_CONTRACT; dated artifact + admin surface Defects caught: out-of-band NFL schedule/index refresh restamped artifacts the scheduled workflows own and tripped four one-stamp guards — reverted to committed state, which already covered the weekend; the operator reads receipts, the system runs itself
211-R-D	04e288bea	2026-08-27	automation proven by fixture clock: three-day lifecycle (win→advance, carry-prior open, loss→restart, no-play hold), material refresh as re-derivation, correction append, scheduled+manual dispatch composing idempotently under the lease; forward-coverage builder wired into daily-products.yml at the receipts cadence (bash -n verified); runbook carries the dry-run recovery form Defects caught: a timed-out suite kill landed inside a mutation probe and left the LIVE settlement-lineage guard neutered on disk — both mutating() helpers hardened to probe a sibling copy and assert the live module untouched; strays gitignored
211-R-EF	5e2258b1b	2026-08-27	public next-transition copy on /bank-builder and /moonshot quoting the runbook registry (guard ties the quoted time to daily-products.yml's REAL cron); /launch gains Daily Product Operations (lifecycle, frozen policy, counts, exposure, last transition, watchdog) and Forward Coverage (per-sport counts + findings) — both rendered verbatim from their writers' dated artifacts, absence typed as the finding; forward dates browser-proven navigable on /simulate; public export re-proven clean of internal routes Defects caught: the new panel carried a raw hex fallback literal — this train's own ratchet caught it; the flagged ops build leaves internal routes in out/, so the public export must be rebuilt before any built-HTML guard runs
211-final	3d66b6526	2026-08-27	P211 closed at one stamp: R-EF registered, execution log shipped (six releases, eight self-caught defects, coverage findings typed by cause), suite 5203/5199/0/4 matching the record exactly; production served this commit with the /bank-builder next-evaluation line cache-bypass-proven; color scan excludes transient mutation-probe copies Defects caught: two late self-caught defects logged in the release itself: the sibling-copy hardening's own scan race, and a register row that spelled the hex literal it described (the guard was right; the prose was reworted)

RELEASE	COMMIT	DATE	WHAT SHIPPED
213-R-A	4be8f3ab7	2026-08-27	homepage launchpad: the founder-flagged badge stack + manifesto paragraph REMOVED (destinations /about + /methodology verified to already carry every concept); 5-word headline, three pinned actions, ONE derived live-status row; measured — primary action y=174 at 1280x800, four live sport cards in the first viewport (was zero), mobile shows all three actions + status + first card (before: none); footer's stale About paragraph ('MLB is the one sport currently modelled') removed with the brand line kept as text; EPL rail sublabel no longer a methodology sentence; first-viewport guard on BUILT output Defects caught: the release's own first draft said '28 events today' by summing Saturday's UFC bouts into Tuesday (browser caught it; events now count only LIVE days); e2e caught the brand name vanishing from rendered text when the manifesto left
213-R-BC	264a69882	2026-08-27	boilerplate centralized: 'paper-only' 15→4 on the homepage (nav Product descs, sim-hub sublabels, section chips trimmed — the chrome owners keep the truth); /today deduped to the slate header; /markets header compressed to one provenance line with the P185 open-example contract intact; shrink-only per-route repeat ratchet frozen at measured+2 (live-state headroom) Defects caught: the release's own compression joined a ban-dodging line-split ('beat the ↩ market') and dropped a required caution phrase — both restored compressed; a latent tmpdir-hex /90/ flake in the ops CLI guard surfaced and was bounded; the homepage word ceiling was corrected with measured live-state variance (1,432 pregame → 1,501 in-progress)
213-R-C2	603928d2c	2026-08-27	/epl and /bank-builder compressed with every honesty contract intact: the validation limitation still LEADS /epl with the explainer and receipt behind disclosures (limitation-leads + P185 nav contracts guard-verified); /bank-builder's top essay became one purpose line + the Sprint-035 sample-size truth + a mechanics disclosure — browser-proven that state banner, ladder position and both lanes now sit inside the first 1280x800 viewport
213-R-C3+G	2cc346730	2026-08-27	/mlb + /results trims ('model edge pending' → 'a market read, not a model claim'); the UFC reason fallback fixed at the generator (coin-flip language earned only within 45–55%); versioned public-content contract with the /launch UX Assurance panel rendering it (one source, no hand-set tile); P213 closed MATERIAL_PROGRESS by its own rule Defects caught: the artifact carrying the false coin-flip sentence refreshes on its OWNING workflow's stamp — out-of-band regeneration refused (admin/ufc-lane.json pins the same stamp)
214-R-A	aa64df939	2026-08-27	/build walked and browser-proven (add-to-slip 2→3 across routes, typed out-of-pool limitation, 24 customize/swap controls); the shared header's trio strip removed from four routes; /moonshot's record now DERIVES from the portfolio — the hardcoded '0–7 · every card has lost' had drifted from the canonical 0–1 — and 'not a ladder' no longer contradicts the 3-STEP LADDER section below it Defects caught: the baseline conservation failure was classified REALITY/timing (two slips between games-final and a settle slot that then MISSED BOTH CRONS — the best-effort class; resolved by the documented dispatch remedy) — pushes held rather than shipping a red gate
214-R-CD	40076dc9d	2026-08-27	sport×state scene matrix on three engines, discovery-driven from the export's own RSC payloads (never date-pinned): ready non-MLB proves the FULL stage ceremony (dialog → narration → report; UFC proven on Chromium/WebKit/Firefox), MLB ready is a direct link, refusals end in place with Escape+focus-restore, settled navigates, NBA/NHL typed absence, reduced-motion run; absent states SKIP with typed reasons; cross-surface reconciliation guards (hero count === day-view count; no ready events under a NO_EVENTS owner) Defects caught: two discovery drafts failed before the durable form: chips are client-rendered (absent from HTML), then the wrong payload split key; chip locators need the mixed-case DOM text under the CSS uppercase
214-R-EF	cdba297f5	2026-08-27	identity load-failure closure: TeamMark (canonical) gained the onError rung its chain lacked — a 404 past the presence check had shown the native broken icon on every consumer; five page-local raw sites migrated to canonical resolvers, tightening the EXISTING identity ratchet from seven legacy entries to two; failure fixtures abort every remote image on /, /simulate, /ufc and prove no visible break survives; built-link-integrity guard measures ZERO dead internal destinations across 290 exported pages Defects caught: the first draft built a DUPLICATE ratchet before finding the rightful owner (identity-assets.test.mjs) — deleted, with its one novel assertion folded into the owner; the failure probe's fixed wait raced hydration on cold serves — poll form

RELEASE	COMMIT	DATE	WHAT SHIPPED
214-R-H	0c2f63f12	2026-08-27	retired-label sweep over all 290 built routes with every hit CLASSIFIED: 'Parlay Lab → /picks' on 16 game reports renamed to Parlay Center → /build (label pin repointed, contract unchanged); internal 'parlay optimizer' naming dropped from /mlb; Homer Nukes chrome links verified LEGITIMATE (revived 2026-08-17 — the tree outranks stale memory); paper-only ceilings ratchet DOWN on all 16 routes to measured+2
214-R-I	9070600a7	2026-08-27	P214 close — five releases registered, the train's red gate diagnosed to two real classes and both fixed at the root
215-R-A1	8bb32bd24	2026-08-27	the pre-event boundary the generator never had: generate_mlb_board refuses started events BEFORE the cost estimate (so a forbidden market is never bought) and carries typed MISSED_COVERAGE receipts; the full-game adapter forces `unavailable` on a started game so the artifact structurally cannot hold a probability. Both fail closed — an unreadable start counts as started, equality is not pregame — and a refused game keeps its entry in the day's denominator. Proven on its first live run: the Aug-27 recovery refused Rockies@Nationals mid-game and published the six that were genuinely pregame Defects caught: the generator had `_captured_before_start` all along, decorating each row with a `researchEligible` flag and gating nothing
215-R-A2	87cd457aa	2026-08-27	a publication deadline derived from the earliest eligible start (never a fixed hour), six states with UNKNOWN never green, detection as a composite action riding five workflows plus a dense-cron watchdog asking seventeen times a day, and guarded self-recovery capped at one dispatch per ET day Defects caught: /simulate called the refused game ARTIFACT_READY and advertised four market families for it (readiness was a SLATE-level fact every game inherited); the full-game adapter read Date.now() so a pinned regeneration returned different bytes; the refusal's first sentence blamed missing lineup data — true, and standing in for the real reason
215-R-A3	69b3854b1	2026-08-27	the Aug-27 incident receipt: AUTOMATION_MISSED, the five never-delivered slots with the runs either side proving it was not a platform outage, per-game coverage (6 of 7 recovered, COL @ WSH permanently uncovered and kept in the denominator), 24 credits, and the reconstruction deliberately NOT built
215-R-E	b21ee8288	2026-08-27	UFC card coverage reconciles at the write (priced + market-not-open + join-failed = the card, or the capture refuses); every unpriced bout carries its boutId, corners, weight class and next check; MARKET_NOT_OPEN and JOIN_FAILED separated by evidence Defects caught: the Aug-29 Shanghai card published 8 of 13 bouts priced with oddsReady:true and blockers:[] — readiness was `bouts.length > 0`, so one priced fight out of thirteen would have read as a ready, unblocked card; the other five were five English sentences nothing downstream could join to a bout
215-R-D1	d02fab91	2026-08-27	the canonical NFL index is re-derived on EVERY window including empty ones, and the commit is ungated to match — a correction computed and not committed is not a correction Defects caught: the index read nextKickoffUtc 2026-08-24, forecastsUpcoming 1, forecastsStarted 0 for a game played four days earlier, across four green runs: the builder sat inside the events!=0 branch and the 18-hour window had been empty since preseason Week 3. The builder was never wrong — it was never called
215-R-B	f3d4b11d8	2026-08-27	the publication SLO generalised to all four sports (MLB day, NFL window, UFC card, EPL matchweek — one shared judgement, rolled up WORST-OF, every probe on committed artifacts) and the public banner gained a 'late' state measured against the VISITOR'S clock, so a detector that stopped running cannot make a late slate look on time; both inputs optional and absent ones fall back to the patient wording Defects caught: two of my own, both caught by running it: the EPL probe guessed three field names, matched none of the capture's `kickoffIso`, and reported NO_EVENT for a matchweek with ten fixtures three days out; and JOIN_FAILED fired for all five unpriced Shanghai bouts because the authorised UFC call is the BULK endpoint (62 unmatched events, nearly all on cards weeks away) — a rule that fires on every card forever is a constant dressed as a diagnosis

RELEASE	COMMIT	DATE	WHAT SHIPPED
215-R-E2	98128a0fe	2026-08-27	ufc-odds-refresh repointed from the retired per-event Python path to the authorised bulk capture ufc-fight-week already runs — one receipt, one ledger, one contract; its dump now reports the coverage block and the dated public sibling rides the commit Defects caught: the workflow had been unrunnable for as long as the UFC receipt has existed — the guard refused the per-event path correctly and loudly every time, and nothing had repointed the caller, so the obvious button for 'refresh UFC odds' spent a run printing a refusal. Found by pressing it
215-R-E3	cc68db57d	2026-08-27	a join failure is decided by FIGHTER IDENTITY, not by the clock — a real miss is a fight we hold whose fold missed on one side, so at least one fighter still matches somebody we know is fighting; another promotion's bout shares nobody with our card however close its start. Honest limit stated and guarded: a both-sides fold failure is undetectable and reports MARKET_NOT_OPEN, under-claiming rather than inventing Defects caught: two wrong rules before the right one, both falsified only by live data: 'ANY unmatched provider event' matched 62 (a constant dressed as a diagnosis), and 'inside this card's time window' still matched 11 regional-circuit bouts running the same weekend
215-R-F	ae287bd18	2026-08-27	register and Operating Record regenerated at one stamp (152 rows, 13 pages, verified against the produced PDF bytes and repackaged behind the download panel); NFL role evidence rebuilt once its injury feed was recaptured Defects caught: the role-evidence guard was red for a TRUE reason — sport-schedules owns the NFL injury capture and sport-schedules is a 13:00 UTC job, which was inside the band of events GitHub never delivered, so the feed was 29 hours old against a 24-hour bound. A fourth casualty of the same outage, found by the guard chain rather than by looking
215-R-E4	b07efbc0b	2026-08-27	second-chance fighter matching (lib/sports/ufc/fighter-alias.mjs) recovers bouts whose fold missed on spelling alone — tokens joined without spaces for a name written as two, tokens sorted for reversed order, generational suffixes dropped; BOTH fighters must agree and ambiguity refuses, because a real price on the wrong fight is worse than a missing one. Deliberately NOT a loosening of the shared nameKey, which joins the model to an 8,642-bout corpus. Every rescue stamped joinMethod:'alias' and listed in aliasJoins so the fold's health stays visible Defects caught: the identity test from R-E3 immediately found five REAL join failures on the Aug-29 card — 38% of it, priced and discarded: reversed CJK order (Ding Meng ↔ meng ding, Xiao Long ↔ long xiao), a dropped 'Jr.' (Levi Rodrigues Jr. ↔ levi rodrigues), and single names the book writes as two (Sumudaerji ↔ su mudaerji, Aoriqileng ↔ aori qileng)
215-R-E5	880f84344	2026-08-27	ships the capture-script wiring R-E4 committed everything else for — `git add app/src ...` never reached `app/scripts/`, so the alias matcher and its eleven guards went in while the one file that calls them stayed in the working tree Defects caught: work done, correct, tested and then not delivered, with a green run on top: the capture came back 8/13 with all five bouts still JOIN_FAILED while a local replay against the real nameKey resolved every one. The tests could not catch it — they test the matcher, and the matcher was fine; only the artifact could, and it said so
215-R-C	b07872560	2026-08-27	EPL forecasts build from the NEWEST fixture capture (sorted), with four guards: no consumer may select with .find(), the builder must sort and take the last, the published kickoffs must agree with the newest capture on every fixture, and ten fixtures spanning four days may not share one slot. Rebuilt rows carry their real kickoffs across Fri-Mon and the publication SLO's EPL reading goes 2/20 to 10/20 Defects caught: `readdir().find(...)` returned capture-2026-08-09 out of twenty-five append-only files, so EVERY EPL forecast ever published was built from an eighteen-day-old fixture list. The kickoff is part of the canonical eventId, so all ten matchweek-2 rows carried one fabricated 20260829t1400 slot — Crystal Palace v Manchester City kicks off the DAY BEFORE the time its own forecast claimed, meaning a freeze-before-kickoff check would pass on a match already played and settlement would join by an id no official result carries
215-R-G	5a307c507	2026-08-27	register catch-up for the alias-join release; Operating Record regenerated at 155 rows, 13 pages, verified against the produced PDF bytes
215-R-H	25c4c1200	2026-08-27	the alias join proven on the live card — the capture that had returned 8/13 for days came back 13/13 (89 per-book rows, one credit), all five bouts recovered by name alone; coverage reconciles at 13 priced / 0 not-open / 0 join-failed and oddsReady is true honestly for the first time, with eight exact joins and five stamped alias so the fold's weakness stays visible. Register and Operating Record closed at 158 rows

RELEASE	COMMIT	DATE	WHAT SHIPPED
216-R-A1	21e59b297	2026-08-27	ONE owner for the date-and-sport URL contract (lib/nav/date-sport-route), replacing six private implementations across simulate, results, the results date page, the board date banner and the MLB board body. Introduces no router: date-in-path and sport-in-?sport= are both the repository's own conventions, written down once. Declares per surface whether a date is even expressible and REFUSES rather than guessing — a dated link to a today-only surface returns null a caller can render, not a link to a 404. Eleven guards including the ownership scan Defects caught: my own overstatement, caught by checking: the first draft claimed every date step cost a 308 redirect, and production served zero unslashed dated links because <Link> normalises at render — the drift was latent, not visible, and the claim is corrected in the module and its guards. The ownership guard itself stripped comments non-line-preservingly and reported six offenders at unrelated line numbers
216-R-C	e85232135	2026-08-27	five ledgers reconciled and PROVEN SEPARATE: each internal identity asserted for the first time (settled = W+L+P, staked = one unit per settled card, tiers partition the stream, one slip id once), and the boundary asserted rather than assumed — the board record carries no money fields or money class, no product's cards appear in another's ledger, and there is deliberately NO combined settled figure, its absence guarded. Worst-of state, surfaced on /launch as one row per ledger with no totals row
216-R-E2	0b93bebb7	2026-08-27	a re-derivation publishes creditCost 0 and a derivedFrom receipt (response hash + acquisition instant), so a free transform is distinguishable from a bought one in the artifact rather than only in a run log; proven live at '0 credit(s) (re-derived, nothing bought)' Defects caught: the cost field read the last ledger entry unconditionally, which on a re-derivation is the EARLIER purchase — a transform that spent nothing claimed a credit, the same class of accounting lie the re-derivation path is guarded against everywhere else
216-R-E1	635bae6cc	2026-08-27	acquisition and transform separated: the raw provider response is persisted with its response hash, the provider's own usage headers and its acquisition instant, and a dispatch inside the spend cooldown now loads it and continues through the SAME transform instead of exiting. Three things the free path may never do, each guarded — contact the provider, record a request for a call that never happened, or re-stamp the cache (which would move acquiredAt forward for bytes nobody re-bought). Reader fails closed on missing file, unknown schema, edited fingerprint, non-200 or a body whose hash no longer matches. Proven live: 13/13 re-derived with cumulative spend unchanged at 16/500 Defects caught: closes the remainder P215 filed against itself — a cooldown is a statement about PURCHASES, and blocking free re-derivation cost three dispatches on 2026-08-27 while a corrected join and a corrected classifier each ran against a live card and changed nothing
216-R-F	91608dcba	2026-08-27	register catch-up for P216's A1/C/E1/E2 and P215 R-H; Operating Record regenerated at 163 rows, 14 pages, verified against the produced PDF bytes
217-R-A	34f8d3f88	2026-08-27	the ten-row workstream register as committed data with a DERIVED classification (SHIPPED requires a commit git contains; a gate must name its own acceptance event; a row may not inherit another's excuse); the shared date/sport control family over P216's URL owner with /simulate migrated off ~55 inline lines and SSR parity proven against the built export; and unidentifiable legs refused at SELECTION in build-risk-ladder Defects caught: a LIVE card that could never settle — today's longshot shipped two legs on BAL @ STL, started 4.5h before the card was generated, neither carrying a gamePk, so neither leg nor card could ever grade; the ladder did that deliberately ('never grading beats grading against a guess') while the P201 qualified-leg contract called it a failing build, and the guard was right. Plus three of my own in the control swap, all caught by diffing the BUILT export: chips dropped out of the prerendered HTML, the date nav lost its surface-specific accessible name, and the Suspense fallback rendered the same hook-using component it was meant to contain
217-R-B	e9eab1411	2026-08-27	register catch-up for P217 R-A and P216 R-F; Operating Record regenerated at 165 rows, 14 pages, verified against the produced PDF bytes

RELEASE	COMMIT	DATE	WHAT SHIPPED
218-R-A	1eccd1a4b	2026-08-27	both DATE-CAPABLE surfaces now render the shared control family — /results/date/[date] joins /simulate and gains an 81-option date picker it never had (prev/next alone meant reaching a date three weeks back took three weeks of clicks), navigating the same allDatesSorted window the page already computed. The register gains PARTIAL, which counts as OPEN for classification: it exists only so a row can carry live evidence without that evidence being mistaken for completion Defects caught: the control assumed every surface's default day is today, so the first Results build rendered 'Today · Wed, Aug 26' on a page whose entire subject is the past — a surface now names its own default ('Latest' vs 'Today') and a guard forbids any page calling a settled date today
218-R-B	98a36bde4	2026-08-27	register catch-up for P218 R-A and P217 R-B; Operating Record regenerated at 167 rows, 15 pages, verified against the produced PDF bytes Defects caught: the register's own schema guard caught the insertion — rows are newest-first by date and an Aug-27 row had been placed above an Aug-28 one; reordered rather than re-dated
218-R-C	55a89dc11	2026-08-28	R-A's built-HTML guards moved behind a newestSettledDir() helper that returns null when there is no export; verified by moving out/ aside and re-running, which is the CI condition exactly Defects caught: two guards I had just written called readdirSync on out/results/date directly, and the CI gate runs the unit suite BEFORE it builds — so they threw and turned a clean tree red on two consecutive commits while the local gate, with a build on disk, passed every time
219-R-A	5da227823	2026-08-28	the publication SLO's NFL probe now consults the durable forecast-receipt record and joins all three artifacts on providerEventId; NFL reads 16/16 PUBLISHED and the platform state drops from a false MISSED_COVERAGE to PUBLISHING. A guard pins that the detector is not thereby switched off — a started event nobody forecast is still MISSED_COVERAGE Defects caught: two of mine from P215 R-B, found in Phase 0's first read: `published` came from nfl/index.json's `events`, which applies a kickoff lock and correctly retires started games — so every game we DID forecast became 'missed' the moment it kicked off, putting three covered Thursday-night games under an accusation. And the probe joined on a composite `\${away}-\${home}-\${time}` fallback that matched only because two artifacts hold the same values under different field names (dateUtc vs kickoffUtc): it worked by coincidence and would have failed silently on any rename
219-R-B	553f33963	2026-08-28	register catch-up for P219 R-A and P218 R-C; Operating Record regenerated at 170 rows, 15 pages, verified against the produced PDF bytes Defects caught: the schema guard caught P218 R-A carrying an 08-28 date for a 23:35-ET-on-the-27th commit — a UTC value in an ET column; re-dated rather than reordering the register around a wrong value
220-R-A	c2a311dca	2026-08-28	Top 10 boards gated per ROW on the ET day derived from each row's own start (eight corruption cases; the live check judges 40 real rows across four boards), refusals published so a short board is explainable; EPL capture refuses a provisional single-slot round and epl-matchweek now fetches the live source; the NFL commit and lane rebuild require their generation step to have PASSED; and the differentiation audit reports UNPROVEN rather than P0 where its evidence is display-rounded Defects caught: three live, found in Phase 0. (1) All ten EPL matchweek fixtures back on one fabricated 14:00Z slot — two workflows, two sources, and the stale one ran last, publishing Crystal Palace v Man City for Saturday afternoon when it kicks off Friday evening. (2) audit-nfl-differentiation reported P0_DEFECT and killed its step exactly as designed, and the artifacts deployed anyway because P215 R-D1 (mine) had ungated that commit to always(). (3) That P0 could not be proven either: the audit's tiebreaker is the win probability rounded to four places, across a slate spanning 0.012 — two of twelve colliding is close to a coin flip, and its comment claimed a precision it did not have. Also: nightly-settle had not run since 18:21 the previous day, so 2026-08-27's cards were unsettled — dispatched, 199 settled, conservation closed
220-R-B	9f846d9b2	2026-08-28	register catch-up for P220 R-A and P219 R-B; Operating Record regenerated at 172 rows, 15 pages, verified against the produced PDF bytes

RELEASE	COMMIT	DATE	WHAT SHIPPED
221-R-A	23073b145	2026-08-28	both P0 public contradictions traced and recovered: MLB's chain (board present, markets/props/sims all stopped a day behind) self-recovered to 9 covered pre-start games with 6 named MISSED_COVERAGE, and EPL went to 8 of 9 CURRENT_PRE_EVENT about twelve hours before the next lock, for two credits Defects caught: the EPL odds step had skipped at 05:10 with 'no kickoff within 30h (next is 32.8h away)' — that time was the FABRICATED slot, and the real next kickoff was 13.8h away, so the stale capture suppressed the purchase rather than merely mis-displaying times. Plus: coveredEventCount had read 1 since P215 (keyed on a field leans never carry); epl-identity-live.test.mjs still used readdir().find(); correcting the kickoffs orphaned four historical odds captures, named and dated rather than rewritten; and the NFL taxonomy guard asserted every event was SCHEDULED, a property of when the capture was taken
222-R-A	05651baee	2026-08-28	the expected-work graph: six daily owners, each declaring the RECEIPT that proves it ran and how its deadline is derived (from the day's first event where one exists, from the clock only where the day is already over). The evaluator consults no run list, no conclusion and no heartbeat — a guard pins that — which is why it sees a cron that produced no run object at all. All four dropped-cron incidents since 2026-08-27 replay as caught, the Aug-27 one at 16:06Z, an hour before first pitch; in reality nobody noticed until 17:48Z. Rides the publication-slo composite action, inheriting detection across a dozen schedules Defects caught: its first local run opened an incident on the risk ladder thirty seconds before the run that wrote it landed — a receipt-based answer read from a stale checkout is a statement about the checkout, so the artifact now records treeHead. And the NFL inversion guard's $r < 0.6$ bar was calibrated for a 12-16 game slate: at seven forecasts r came out -0.6529 with a 1.63pp published spread, which pure noise clears about one time in nine. Now tested for significance, which catches the original -0.9726, an inversion at $n=7$, AND a genuine -0.65 lean on a full slate that the old bar would have passed
222-R-B	8f35d52b5	2026-08-28	register maintenance: recorded R-A, P221 R-A and P220 R-B, bringing the operating record to 175 rows
247-Phase 0	26515762d	2026-09-08	daily-products recovery no longer goes red on legitimate hold days: completed-evaluation skip guard plus the documented max-age tolerance on the produced-artifacts assert, verified against the day's real NO_PLAY receipt
247-R-A	2c410613f	2026-09-08	integrated matchup totals adopted into the player chain (bridge-derived invariance confirmed, per-family bars); register conservation restored; three pre-existing data-state guard classes repaired at their owners (frozen era fixture, mandatory limits rows, principled reschedule exemption) Defects caught: the record register had gone stale since P222 behind the in-flight exemption; the vault replay suite pinned the rolling results capture; the MLB limits chapter sliced off its own degraded verdict
247-R-A2	0954bc291	2026-09-08	operating-record artifacts regenerated and verified (176 rows, PDF receipt chain) after the P222 R-B register restoration
247-R-B	b0d740a57	2026-09-08	participation-true re-receipt adopted: market-void conditioning on snap-count ground truth (99.96% join), gamma deflation dropped (in-train grid inverted), receiving yards PUBLIC, receptions and rushing demoted to SHADOW naming their bars, passing recorded as losing to baselines; starter-conditioned pass candidate rejected on its own bars Defects caught: every family's prior receipt scored absent-from-boxscore candidates as zero while zero-opportunity appearances were void — 30-48% of evaluated points; the P246 deflation was fit against that artifact
247-R-B2	fdf45121d	2026-09-08	packaged operating-record PDF rotated to the a57fd47f checksum (one packaged artifact per verified record; the two-commit split briefly broke packaging equality in CI and this commit restored it)
247-R-E	059a864b6	2026-09-08	MLB post-start correction register: 186 affected archived games enumerated append-only from committed artifacts, grading verified untouched at the forecast-of-record rule, public disclosure on /results/model-audit and an Archive-integrity mandatory row in the presentation layer Defects caught: 186 of 231 games in the 08-22..09-07 window had post-start final revisions served as pregame

RELEASE	COMMIT	DATE	WHAT SHIPPED
247-R-F	daa3764d3	2026-09-08	closeout: per-game Week-1 matrix, three-candidate model comparison, separate capability/quality/publication/pricing/certification statuses and the named residuals — no blanket COMPLETE while three volume families stay unsupported
